

TANK CLEANING SERVICES

USA DeBusk delivers comprehensive resources and expertise for safe, effective, turnkey cleaning of aboveground storage tanks.

- ▶ State-of-the-art automation for non-entry procedures
- ▶ Remotely controlled robotics to improve personnel safety
- ▶ Extensive pre-project planning
- ▶ Project engineering for 100% spill prevention
- ▶ Minimize confined space entry
- ▶ Ongoing training and mentorship program

Reliable, proven procedures

ELITE TEAMS, RELIABLE RESULTS

USA DeBusk has the management expertise, advanced training and innovative technology to safely operate in the most hazardous environments, including tanks with pyrophoric products, Immediately Dangerous To Life or Health (IDLH) atmospheres, structural damage to internals or roofs, and external leaks.

Our teams are:

- » Highly experienced project managers, API-certified for tank entry
- » Qualified crews with stringent, continuous training programs
- » Professional and precise coordination with customer EHS, Maintenance & Inspection departments
- » Integrated with degassing & vapor control
- » A single source for related services, such as chemical cleaning, hydro blasting, vacuum services, hydro cutting & transportation

CUSTOM-ENGINEERED SERVICES

We gather extensive background information and create a detailed, customized project plan, complete with three-dimensional process layouts. The quality and detail of our pre-project planning assures that we achieve your goals in the safest, most efficient way.

- » Chemical circulation
- » Mechanical
- » Non-entry cleaning & degassing
- » Vapor control

TANK CLEANING SERVICES

Automation

USA DeBusk utilizes the latest automated equipment and techniques to minimize in-tank man hours and improve productivity.

- » Manway cannons
- » Track-drive robots
- » Tank sweep with continuous slurry & removal
- » Manually operated manway jetting
- » Online options to keep tanks in service during cleaning

Waste Minimization and Processing

USA DeBusk is adept at minimizing waste through dewatering and decanting processes using state-of-the-art technology. Our equipment will meet any customer specification for work within units or tank farms. Vapors can be trapped and scrubbed if necessary.

- » 2 & 3 phase centrifugation
- » Belt filter presses
- » Plate & frame filter presses
- » Outhaul & transportation assistance
- » Multiple on-site processing techniques to minimize waste outhaul

Productivity

DSG cleaning and processing technologies decrease time on site, reduce costs and improve overall efficiencies. We offer the ability to simultaneously clean and degas tanks to dramatically reduce turnaround time. For selected applications, cleaning can be performed while tanks remain in service.

FULL LINE OF SERVICES FROM USA DeBUSK:

- » Hydro Cutting
- » Hydro Blasting
- » Hydro Excavation
- » Vacuum Services
- » Unit Clearing & Chemical Cleaning
- » Degassing & Vapor Control
- » Tank, Vessel, and Pipe Cleaning
- » Hot Catalyst Handling
- » Transportation & Storage
- » Fixed Bed Inert Catalyst Handling
- » Pigging & Decoking
